Case Histories

Keynote Address
LaRonde Extension — mine design at three kilometres ................................................................................... 3
F. Mercier-Langevin, Agnico-Eagle Mines Ltd, Canada

Recent case histories of the application of the empirical destressability index methodology ...................... 17
P. Andrieux, A. Turichshev and R. Brummer, Itasca Consulting Canada, Canada; J. Hadjigeorgiou,
University of Toronto, Canada; A. Sampson-Forsythe, Vale Ltd, Canada; B. Simser, Xstrata Nickel, Canada

Stable rock walls in a large open stope at Sunrise Dam Gold Mine ............................................................. 29
L.A. Nienaber and S. Tombs, AngloGold Ashanti Ltd, Australia

Characterising the state of failure of a confined rock mass from the pre to post-peak strength state,
using microseismicity and conventional displacement instrumentation — a case study of the
Williams Mine, Sill Pillar, Canada .......................................................................................................................... 45
A.L. Coulson, AMEC Earth and Environmental, Canada; W.F. Bawden, University of Toronto, Canada

Geomechanical aspects in Alimak stoping at Barrick’s Bulyanhulu Mine .................................................... 61
J. Ran, Barrick Gold Corp., Canada; C. Mfula, African Barrick Gold, Tanzania

Analysis on characteristics of roadway deformation in deep coal mines and its reinforcement case studies .... 77
H.P. Kang, J. Lin and L.P. Si, China Coal Research Institute, China

mine workings design in regional pillar mining conditions — a case study from a Polish copper mine .......... 89
W. Pytel and J. Butra, KGHM Cuprum CBR and Wroclaw University of Technology, Poland

Stress measurement for St Barbara Mines Gwalia Deeps Project — one of the world’s deepest
underground haulage mines ................................................................................................................................. 105
P.M. Dight, Australian Centre for Geomechanics, The University of Western Australia, Australia;
L.A. Snyman, St Barbara Ltd, Australia

Rock Behaviour

Keynote Address
Superbrittleness of rocks at high confining pressure ......................................................................................... 119
B.G. Tarasov, The University of Western Australia, Australia

Preconditioning by hydraulic fracturing — what does it do and what are the issues in modelling it? .............. 135
T.R. Stacey, University of the Witwatersrand, South Africa

Towards a better understanding of squeezing potential in hard rock mines .................................................. 143
F. Mercier-Langevin, Agnico-Eagle Mines Ltd, Canada; J. Hadjigeorgiou, University of Toronto, Canada

Determination of induced stress condition inside Pilar Norte sector .............................................................. 155
C. Orrego, D.A. Cuelio and E. Rojas, Codelco Chile, Chile

Peak particle velocity and frequency spectrum for different rock mass qualities – case studies .................... 169
C. Caceres and R. Pakalnis, NBK Institute of Mining Engineering, University of British Columbia, Canada
Rockbursts and Seismicity

Rockburst prevention in deep copper mines of Poland ............................................................ 187
J. Butra and W. Pytel, KGHM Cuprum CBR and Wroclaw University of Technology, Poland

Temporal evolution of aftershock sequences for re-entry protocol development in seismically active mines ........................................................................................................................................ 199
J.A. Vallejos, Queen’s University, Canada and University of Chile, Chile; S.D. McKinnon, Queen’s University, Canada

Observational studies to mitigate seismic risks in mines — a new Japanese–South African collaborative research project ........................................................................................................................................ 215
R.J. Durrheim and A.M. Milev, SATREPS, CSIR Centre for Mining Innovation, University of the Witwatersrand, South Africa; H. Ogasawara and H. Kawakata, SATREPS, Ritsumeikan University, Japan; M. Nakatani, SATREPS, Earthquake Research Institute of the University of Tokyo, Japan; Y. Yabe and H. Moriya, SATREPS, Tohoku University, Japan; A. Cichowicz, SATREPS, Council for Geoscience, South Africa

Deterministic properties of mine tremor aftershocks .................................................................... 227
T.E. Kgarume and R.J. Durrheim, CSIR Centre for Mining Innovation; University of the Witwatersrand, South Africa; S.M. Spottiswoode, South Africa

Empirical methods for the assessment of seismic system sensitivity ................................................ 239
J. Wesseloo, Australian Centre for Geomechanics, The University of Western Australia, Australia

Ground Support

Keynote Address
An interpretation of ground support capacity submitted to dynamic loading.................................. 251
Y. Potvin and J. Wesseloo, Australian Centre for Geomechanics, The University of Western Australia, Australia; D. Heal, School of Civil and Resource Engineering, The University of Western Australia, Australia

Ground support in high stress mining with high-tensile chain-link mesh with high static and dynamic load capacity ........................................................................................................................................ 273
R. Bucher, Geobrugg Australia Pty Ltd, Australia; A. Roth and A. Roduner, Geobrugg AG, Switzerland; J. Temiño, Geobrugg Andina S.A., Chile

Dynamic testing of High Energy Absorption (HEA) Mesh ................................................................ 283
Y. Potvin, Australian Centre for Geomechanics, The University of Western Australia, Australia; D. Heal, School of Civil and Resource Engineering, The University of Western Australia, Australia

The Yield-Lok Bolt for bursting and squeezing ground support ........................................................ 301
Y.K. Wu and M. Lamothe, Jennmar of Canada, Canada; J. Oldsen, Jennmar Corporation, USA

Field behaviour of hybrid bolt at LaRonde Mine ........................................................................... 309
P. Turcotte, Agnico-Eagle Mines Ltd, Canada

Dynamic performance of the D-Bolt .......................................................................................... 321
C.C. Li, The Norwegian University of Science and Technology and Dynamic Rock Support AS, Norway; F. Charette, Dynamic Rock Support AS, Norway/Canada

Development of a fully debonded cone bolt for rockburst support .................................................. 329
M. Cai, Laurentian University, Canada; D. Champaigne, Mansour Mining Inc., Canada; P.K. Kaiser, Centre for Excellence in Mining Innovation, Canada

A methodology for managing squeezing ground conditions at Mincor’s Mariners Mine, Western Australia........ 343
T. Nester, Mincor Resources NL, Australia; D.J. du Plooy, SRK Consulting, Australia

Recent developments with the Roofex™ bolt © .............................................................................. 353
C. Doucet, Natural Resources Canada, Canada; R. Gradnik, Atlas Copco MAI GmbH, Austria
Effective ground support system design to manage seismic hazard in a high stress diminishing pillar at a Vale mine ................................................................. 367
A.R. Punkkinen and N.R. Mamidi, Vale Ltd, Canada

High-deformation load resistance of macro-synthetic fibre reinforced shotcrete ................................................ 383
E.S. Bernard, Technologies in Structural Engineering Pty Ltd, Australia

**Numerical Modelling**

Simulating fault slip areas of mining induced seismic tremors using static boundary element numerical modelling ................................................................. 395
G.F. Hofmann and L.J. Scheepers, AngloGold Ashanti Ltd, South Africa

Numerical investigation of the stability of roofing with cemented tailings backfill and its application .................... 413
K. Zhao, X.J. Wang, L. Liao, C. Gong and X. Yang, Jiangxi University of Science and Technology, China

Consideration of uncertainty in modelling the behaviour of underground excavations ........................................... 423
B. Valley, P.K. Kaiser and D. Duff, Centre for Excellence in Mining Innovation, Canada

The use of a three-dimensional elastic model to identify rock mass damaged areas in the undercut level at Reservas Norte sector ........................................................................ 437
D.A. Cuello, P.P. Landeros and P.H. Cavieres, Codelco Chile, Chile

PFC3D numerical modelling of round determinate panel test for shotcrete ......................................................... 451
C. Caceres and R. Pakalnis, NBK Institute of Mining Engineering, University of British Columbia, Canada; M. Lewis and B. Seymour, Spokane Research Laboratory, National Institute for Occupational Safety and Health, USA

**Safety, Risk Assessment and Management**

**Keynote Address**

Rock mass strength at depth and implications for pillar design ................................................................................. 463
P.K. Kaiser and B. Valley, Centre for Excellence in Mining Innovation, Canada; B. Kim, MIRARCO, Laurentian University, Canada; R.P. Bewick, Golder Associates Ltd., Canada

Real time risk assessment of hangingwall/roof stability in deep, South African mines ................................................. 477
A.v.Z. Brink, CSIR, South Africa

Relationship between production rates, the caving process and seismicity rates at Palabora Mining Company ........................................................................ 491
S.N. Glazer, South Africa; P.A. Townsend, Palabora Mining Company, South Africa

Explosives magazines in deep and large mines — an overlooked safety issue .............................................................. 503
A.A. Arzi, Israel; A.W. Ovalle, AMEC, Chile

An estimation of the benefits of main ventilation systems optimisation using free splitting networks ......................... 513
E.I. Acuña, MIRARCO, Laurentian University, Canada; I.S. Lowndes, Process and Environmental Research Division, Faculty of Engineering, University of Nottingham, UK; L. Fava, Mathematics and Computer Science, Laurentian University, Canada

Non-linear modelling calibration process for Vale nickel mines Ontario division ......................................................... 521
C. O’Connor, L. Cotesta and R. Brummer, Itasca Consulting Canada Inc., Canada; D. Thibodeau, Vale Limited, Canada

Safety during the recovery of coal pillars under deep cover in the United States of America .......................................... 537
C. Mark and G.S. Esterhuizen, National Institute for Occupational Safety and Health, USA

Strategies for mining in highly burst-prone ground conditions at Vale Garson Mine .................................................... 549
M. Yao and L. Moreau-Verlaan, Vale Ltd, Canada

**Author Index** ...................................................................................................................................................... 561
