Table of Contents — Volume 1

Australian Centre for Geomechanics ........................................................................................................ iii
Organising and Advisory Committees ........................................................................................................ v
Technical Reviewers ................................................................................................................................ vii
Foreword ......................................................................................................................................................... ix
Preface ........................................................................................................................................................... xi
Sponsors .......................................................................................................................................................... xiii

Vegetation Establishment for Closure

Assessment of reclamation status and identification of water stress using airborne remote sensing ................. 3
M. Martínez de S. Álvarez, L. Brown, G. Borstad, P. Martell, J. Dickson, M. Freberg

Reference conditions for rehabilitating mine stockpiles as novel upland ecosystems in Canada’s subarctic 11
K.L. Garrah, D. Campbell

Enhanced revegetation and reclamation of oil sands disturbed sites using actinorhizal and mycorrhizal biotechnology 19
C.W. Greer, N. Onwuchekwa, J. Zwiazek, A. Quoreshi, S. Roy, K.F. Salifu, D.P. Khasa

Comparative inventory of vegetation and soils surrounding Teck Coal Ltd.’s coal mountain operations — 2010 27
M.E. Keefer, A.D. Kennedy, R. Moody, P. Gibeau

The effect of cover crop species on growth and yield response of tree seedlings to fertiliser and soil moisture on reclaimed sites 37
A.A. Kimaro, K.F. Salifu

Thirty years of revegetation experience at the Key Lake uranium mine in northern Saskatchewan 47
P. Landine, D. Fenske, R. Van Stone

Soil capping and vegetation trials on waste rock at Cameco Key Lake uranium mine 57
L.A. Leskiw, C. Qualizza, J.D. Zettl, S.L. Barbour

Evaluation of reclamation success in Alberta’s oil sands 65

Can anatomical and physiological characters predict plant adaptation on tin-mined land in Bangka 75
E. Nurtjahya, Robika, Dorly

Trichoderma harzianum as a tool for reaching suitable growth and vegetation cover on mine tailings 85
T.C. Regnier, N.S. Mokgalaka, O. Memel, M.D. Laing

Revegetation of post-mined land using directly planted native and local shrub species 93
D.D. MacKenzie, K.N. Renkema

Assessing re-establishment of functional forest ecosystems on reclaimed oil sands mine lands 101
J. Straker, G. Donald

The mine that almost closed — a review of fifteen years of reclamation at the Kitsault Mine, Alice 111
Arm, Canada
N. Tashe, L. Borges
Soils for Mine Closure

Defining best management practices for conservation of reclamation materials in the mineable oil sands region of Alberta

Soil salvage and placement – breaking new ground at Teck’s Cheviot open pit coal mine
L.D. Paquin, C. Brinker

Soil moisture and bulk density monitoring at Syncrude Canada Ltd.
B.L. Drodowski, R.L. Faught, A. Underwood

Optimising soil physical properties for rehabilitation of mined land – effects of tine type on soil strength and root proliferation

Comparison of soil quality and productivity of reclaimed and native oil sands soils
L.A. Leskiw, T.B. Zeleke

Surface soil handling on mines in the boreal forest – from textbook to operations
D.D. MacKenzie, M.A. Naeth

Soluble calcium and sulphate excesses related to stress in Pinus contorta on peat amendments of reclaimed landscapes in the boreal oil sands region
C. Middleton, K.F. Salifu, W.S. Tedder, D.S. Chanasyk, J. Hastie

Innovative techniques to improve reclamation practices in Alberta oil sands
K.F. Salifu, J. Woosaree, S. Wells, B. Anderson

Substrate conditions, root and arbuscular mycorrhizal colonisation of landforms rehabilitated after coal mining, sub-tropical Queensland
A.V. Spain, M. Tibbett

Risk-based soil remediation guidelines in coal mine closure
M.J. Tindal, D. Brand, B. Ludwig, D. Hackbarth

Progressive Reclamation

Reclamation of the Gregg River Mine, Canada
D. Brand, A. Etmanski

Lisheen Mine Tailings Management Facility – progressive reclamation project
S. Callery, S. Wheston

Progressive reclamation in a tropical rainforest – French Guiana
G. Guillen

Case study – Kemess South mine site reclamation and closure – contaminated sites assessment and remediation (non-core areas)
M. Cameron, R. North, J. Wilkins, L. Flemming

Fort McKay First Nation’s involvement in reclamation of Alberta’s oil sands development
K. Buffalo, C.E. Jones, J.C. Errington, M.I.A. MacLean

Effective reclamation – understanding the ecology of recovery
D. Polster

Progressive reclamation and environmental programmes during pre-operations at the New Afton Copper-Gold Mine, Canada
R. Schmitt, S. Ames, S. Freeman, D. Wilson, M. Anderson, J. McGrath
Reclamation and its succession in the used mine site of PT Newmont Minahasa Raya in Ratatotok, ........................................281
H.N. Pollo, D. Sompie, J. Kojansow, H.I. Mansur

Detection of soil sulphur oxidising bacteria on Suncor’s reclamation material stockpiles and the ........................................291
reclaimed landscape
L.L.R. Marques, L. Oosterbroek, H. Caro-Riano, C. Ehman, M. Zwirink

Engineered Mine Waste Cover Systems

Evapotranspiration cover performance in a high desert environment, north waste rock disposal ........................................303
facility, Rain Mine, USA
M. Creek, M. Wickham, G. Gjerapic

Column tests to assess water flow and oxygen transport in a monolayer cover placed on acid ........................................313
generating tailings
T. Pabst, M. Aubertin, B. Bussière, J. Molson

Physical and geochemical transport modelling of pre-oxidised acid-generating tailings with a ........................................323
monolayer cover
T. Pabst, J. Molson, M. Aubertin, B. Bussière

Store and release cover performance at Cadia Hill gold mine, Australia ..........................................................333
T.K. Rohde, D.J. Williams, J. Burton

Pillara mine closure and rehabilitation ..........................................................343
A. Prasad

Decommissioning of Tailings Dams

ICOLD – sustainable design and post-closure performance of tailings dams ........................................................353
A.G. Bjelkevik

Closure of tailings dams ........................................................................................................................................361
Y. Mao, S. Kam

Deposition thickness and evaporative drying for oil sands tailings in northern Alberta ........................................373
Q. Song, M. O’Kane, N. Dhadli, J. Matthews

Spatial and temporal evolution of Cu-Zn mine tailings during dewatering .........................................................383
B.L. Sherriff, D.J. Etcheverry, N.V. Sidenko, J. Van Gulck

Unique Challenges in Mine Closure

Geochemical modelling aids in mine closure – implications of orebody genesis to mine closure ............................389
approaches
D.J. Carpenter, J. Gillow

Challenges and opportunities for mine closure planning in Indonesia ............................................................393
S. Finucane, P. Soeprapto, K. Wiryanto, T. Ainscough

Use of three-dimensional topography as a tool for closure integration at Syncrude Canada Ltd.’s ............................403
Mildred Lake and Aurora North leases
L.M. Hachey, A.V. Lanoue

Investigation into the current closure practices of platinum tailings storage facilities – the South ............................413
African context
J.C.J. Boshoff, J.N. Hamman
Balancing focal species, recreation and biodiversity in mountain coal mine closure planning – ......................... 423
J.L. Kansas, M.D. Symbaluk

Usage of laboratory bench scale testing in environmental remediation strategies ........................................ 433

Utilisation of coal/biomass fly ash in the control and treatment of acid mine drainage .................................... 443
K.D. Penney, E. Mohamedelhassan

Criteria and indicator framework for oil sands mine reclamation ................................................................. 455
M. Poscente, T. Charette

Translating the closure plan into an operational reclamation programme at Canadian Natural’s .................... 463
Horizon Oil Sands Mine
S. Tuttle

Field performance of in-line flocculated fluid fine tailings using thin lift deposition (NOT AVAILABLE) ........ 473
G.W. Wilson, L.K. Kabwe, R. Donahue, R. Lahaie

Mine Closure in Cold Regions

Reclamation and remediation of the Tom Property, Macmillan Pass, Canada ............................................. 485
K. Woloshy, H. Hartmaier, I. Bruce, S. West

Use of engineered landfills for arctic mine site reclamation ......................................................................... 495
D. Johnson

Development of a technical guidance document for cover system design in cold regions ......................... 503
M. Nahir, M. O’Kane, B. Ayres

Reclamation and mine closure plan at Pogo Mine, Alaska .......................................................................... 513
M. Umedera, S. McLeod, B. Farnham, S. Staley

Mine Closure Wetlands and Pit Lakes

Constructing habitat for a sustainable native fisheries in the Sphinx Lake end pit lake system ......................... 525
C.J. Brinker, M.D. Symbaluk and J.G. Boorman

History of wetland reclamation in the Alberta oil sands ............................................................................... 535
C.A. Daly

The development of a pit lake at Agrium Kapuskasing Phosphate Operations – an integrated .................... 545
geotechnical, geochemical and biological approach
K.G. Munnoch, S.E. Renaud and K. Connors

Disposal of waste materials at the bottom of pit lakes ................................................................................. 555
M. Schultze, B. Boehrer, K. Friese, M. Koschorreck, S. Stasik, K. Wendt-Potthoff

Existing mine pit and natural lakes in northern Minnesota as predictors of total mercury ....................... 565
centration of a mine pit at closure
C.J. Twaroski and L.I. Segroves

Knowledge transfer process – wetland reclamation research in the Alberta oil sands ................................ 573
J. Hornung, C. Wytrykush, G. Haekel, T. Charette, M. Trites

Modelling a pit lake district to plan for abstraction regime changes ........................................................... 581
C.D. McCullough, M. Müller, K. Eulitz, M.A. Lund
Landform Design for Sustainable Closure

Geomorphic design of alluvial channels for oil sands mine closure ................................................................. 595
F. Ade, L. Sawatsky, A. Beersing, M. Fitch

Aesthetics for mine closure ........................................................................................................................................ 603
G. McKenna, E. Scordo, D. Shuttleworth, J. Straker, B. Purdy, J. Buchko

Assessing soil erosion on a rehabilitated landform using the CAESAR landscape evolution model © ...................... 613
J.B.C. Lowry, T.J. Coulthard, G.R. Hancock, D.R. Jones

A water-covered waste dump in an arid climate? A remediation concept for Brukunga Mine ............................... 623
D. Brett, M. O’Kane, P. Scott, J.R. Taylor, M. McLeary, D.J. Williams

Case study for avoiding treatment in perpetuity – the Brukunga pyrite mine example ........................................ 633
P. Scott, J.R. Taylor, P. Grindley, M. McLeary, D. Brett, D.J. Williams, M. O’Kane

Author Index .......................................................................................................................................................... 645
